

ABSTRACT OF THE DISCLOSURE

A polyester fiber containing polyethylene terephthalate at 90 mol% or higher of a whole repeating unit in a molecular chain thereof, the fiber
5 having an intrinsic viscosity [IV] of 0.85 dl/g or higher and simultaneously meeting the following characteristics: (a) strength ≥ 6.0 cN/dtex; (b) strength \times (breaking elongation)^{0.5} ≤ 26.0 cN/dtex.%^{0.5}; (c) monofilament linear density ≤ 5.0 dtex; and (d) main dispersion peak temperature of loss tangent ($\tan \delta$) in the measurement of dynamic viscoelasticity at 110 Hz $\leq 147.0^\circ\text{C}$, and a
10 polyester dipped cord, which is obtainable by twisting one or more than one base yarn together into a pretwisted yarn, where the base yarn is made of a polyester fiber according to any one of claims 1 to 4; twisting two or more pretwisted yarns together into a greige cord; and subjecting the greige cord to dip treatment to give a dipped cord simultaneously meeting the following
15 characteristics: (a) tenacity conversion efficiency in the dip treatment (dipped cord tenacity / greige cord tenacity) $\geq 96\%$; and (b) elongation at a specific load + dry heat shrinkage $\leq 7.5\%$.
